

I have been a subscriber of satellite radio for about 2 years. It has come to my attention that attacks are being made on the services that XM Radio is providing especially as it pertains to traffic and weather information. I travel in a lot of cities across the country and the information that XM provides is very useful and timely. It almost always happens that when I need info and try to search the dial for this info I catch the end of the presentation and have to wait for 30 minutes to get it again. Searching the dial can be a traffic hazard especially in stop and go traffic, which is when I most need this information. With the traffic and weather info on satellite radio I know exactly where to dial in, and the information is constantly on so there is no waiting for the info. I respectfully ask that you not limit the services that satellite provides to me.
